

ROHIT RAMESH ZORE

Full Stack Developer | MERN Stack | React Native | JavaScript | Python | MySQL

+91 8879466037 | rzore430@gmail.com | Mumbai, Maharashtra 400030 | [linkedin.com/in/rzore430](https://www.linkedin.com/in/rzore430) | github.com/zore1803

Total Experience: Full Stack Developer Intern at DataCircles Technology (Current) | 4-month Cybersecurity Internship (Elevate Labs) | 2 Production-Grade Projects (Web + Android APK)

CAREER OBJECTIVE

Aspiring Full Stack Developer seeking an entry-level or internship role where I can apply hands-on experience in React Native, Python, REST APIs, and database development to build scalable, secure, and user-centric web and mobile applications.

PROFESSIONAL SUMMARY

Full Stack Developer Intern at DataCircles Technology (Thane), currently working on a MERN stack CRM and client portal product. B.E. student in AI & Data Science (Expected 2027) with 2 production-grade applications built solo from scratch — LOQIT (active, Oct 2025–Present) and E-Guruji. Proficient in React, Node.js, Express, MongoDB, React Native (Expo), JavaScript (ES6+), Python, MySQL, and Supabase (PostgreSQL). Skilled in RESTful API development, OAuth 2.0 and JWT authentication, Razorpay payment gateway integration, and cross-platform mobile development. Also completed a 4-month cybersecurity internship at Elevate Labs strengthening secure coding practices. Passionate about building secure, scalable, and user-centric digital products.

SKILLS

Front-End Development: React Native (Expo), JavaScript (ES6+), HTML5, CSS3, Responsive Design, Cross-Platform Mobile Development

Back-End Development: Python, Node.js, Express.js, REST API Design, API Integration, Supabase Functions

Databases: MySQL, MongoDB, Supabase (PostgreSQL), Database Schema Design, CRUD Operations

Authentication & Security: OAuth 2.0, JWT Authentication, Secure Session Management, Role-Based Access Control

Tools & Platforms: Git, GitHub, MongoDB Compass, Razorpay Payment Gateway, Expo, Wireshark, Linux

Soft Skills: Agile Development, Problem-Solving, Team Collaboration, Time Management, Communication

EXPERIENCE

Full Stack Developer Intern

Jun 2026 - Present

DataCircles Technology, Thane

- Joined as a Full Stack Developer Intern working on a MERN stack (MongoDB, Express, React, Node.js) CRM and client portal product, contributing across both front-end and back-end modules.
- Working with a React + Vite front-end and a Node.js/Express REST API backend, gaining hands-on exposure to role-based authentication, JWT, and MongoDB schema design in a production codebase.
- Collaborating on real-world admin and client portal features including project tracking, billing, and document management modules as part of the development team.
- Ramping up on the existing codebase architecture, REST API conventions, and Razorpay payment integration used across the platform.

Cybersecurity Intern

Jan 2026 - Apr 2026

Elevate Labs

- Developed a Python-based vulnerability scanner and keylogger tool for authorized internal security testing, demonstrating applied scripting and automation skills.
- Performed network traffic analysis using Wireshark to identify anomalies and support security investigations.
- Assessed firewall configurations and password security policies, documenting findings with recommended remediation steps.

PROJECTS

LOQIT – Full Stack Anti-Theft Platform (Web App + Android APK)

Oct 2025 - Present

Personal Project / Startup (Self-Initiated)

- Architected and shipped a full stack cross-platform security product with both a web application and a working Android APK (currently in production/internal testing) — built using React Native (Expo) for mobile, web front-end for the dashboard, and Supabase (PostgreSQL) as the shared back-end.
- Designed and integrated OAuth 2.0 and JWT authentication flows across 3 user role types, securing device-level access and protecting against unauthorized session access and privilege escalation.
- Built a full stack Law Enforcement Command Center dashboard featuring GIS-based real-time device tracking, incident logging, and RESTful API communication with sub-second data sync between client and server.
- Implemented end-to-end encrypted API communication and server-side input validation across all endpoints, following OWASP secure coding best practices to protect user and device data in transit.
- Managed the complete product lifecycle solo — web app, Android APK, BLE integration, database schema, and REST API architecture — demonstrating full end-to-end ownership across both mobile and web platforms.

E-Guruji – Full Stack Puja Booking Web Application

Sep 2024 - Oct 2024

Academic Project

- Built a full stack multi-role service booking platform from scratch in under 2 months, handling front-end UI, back-end API logic, authentication, payment integration, and MySQL database design independently.
- Implemented JWT-based authentication with secure session management and RBAC for 3 distinct roles (user, priest, admin), ensuring zero cross-role unauthorized data access.
- Integrated Razorpay payment gateway with server-side transaction validation and error handling, enabling end-to-end secure online booking payments.
- Designed a normalized MySQL relational database schema across 5+ tables (users, priests, services, bookings, payments) with optimized queries to support all CRUD operations.
- Built a full admin panel enabling real-time management of users, service listings, bookings, and transaction records — demonstrating complete back-end and database ownership.

EDUCATION

B.E. – Artificial Intelligence & Data Science | Vasantdada Patil College of Engineering, Mumbai

2023 - 2027

CGPA: 7.27 / 10.0 | Expected Graduation: May 2027 | Relevant Coursework: Data Structures & Algorithms, Computer Networks, Operating Systems, Database Management Systems, Python Programming, Web Technologies, Object-Oriented Programming, AI & Machine Learning

CERTIFICATIONS

- **Jr. Penetration Tester – TryHackMe** | Validates hands-on skills in web app security, network penetration, and privilege escalation techniques
- **CompTIA Pentest+ Learning Path – TryHackMe (32+ hrs)** | Covers reconnaissance, scanning, exploitation, post-exploitation, and reporting

- **Cyber Security 101 – TryHackMe (45+ hrs)** | Covers threat modelling, cryptography, network security, and incident response fundamentals
- **Pre Security – TryHackMe** | Covers networking fundamentals, Linux basics, and web fundamentals
- **AI Agent Architect – IBM** | Covers AI agent design, LLM integration, and autonomous system architecture
- **Generative AI – GDSC** | Covers generative AI concepts, prompt engineering, and practical AI application development

ACHIEVEMENTS & ACTIVITIES

- Ranked Top 5% globally on TryHackMe cybersecurity platform across 100+ challenge rooms.
- Treasurer – Computer Society of India (CSI), College Chapter.
- College-level Volleyball Player – University Sports Team.
- Languages: English, Marathi, Hindi.
